

The pihms Mobile Application is available on over 95% of the cellular phones in use in the US, not just Smart phones or Blackberries – any cell phone with internet access.

Employees can get a quick view of their available benefits as well as the means to submit and track the status of leave requests. Managers would have access to information updated in real time regarding their direct reports and what issues they need to address.

Initial Safety incident reports can be documented on the spot. First Report of Injury notifications and potential subsequent Safety Alerts can be distributed based on job roles and responsibilities. Effective communication of corporate news, updates and 'job relevant' safety content can be tracked and monitored.
