

## pihmsSafety Solutions™

pihms**Safety**™ provides a means to accurately and effectively manage employee onsite safety from the initial incident documentation to the final corrective action. This solution brings together each essential component of successful employee safety management: Accurate tracking of injury and near miss incident investigations; OSHA regulatory reporting compliance; Comprehensive corrective action project management; Email notifications for incidents and action plans; and wide-ranging data analysis functionality.

---

### Standardized Incident Documentation work-flow:

The intuitive web-based process records injury and near-miss incidents including location, root cause investigation, unsafe conditions, unsafe actions, corrective actions and witness statements for all incidents on or off of the employer premises.

### Industrial Hygiene Sample Data Management

Schedule, perform and report the results of environmental sampling data for a range of sample methods.

### Qualitative Exposure Assessment

Configure user-defined exposure limits or utilize OSHA/RIDDOR and Government Permissible Exposure Limits to meet your company's exposure assessment strategy.

### Assures compliance with occupational health standards

Automatically calculates time-weighted average concentrations – incorporating employee shift durations – allowing comparison to occupational exposure limits and regulatory standards.

### Analyze and communicate results

Generate user-configurable exposure notifications for distributing sampling results and analysis to employees.

### Record and Manage Ergonomic Issues

Accurately track and manage all Ergonomic referrals, reviews, analyses and job/equipment assessments through a systematic process for injury investigation and corrective action planning.

### Reporting

Generate monthly, quarterly and annual safety analytics that can assist in identifying trends and effects of corrective actions at any level within the organization.

## Benefits

- » Accurately track and manage all incidents and injury events.
- » Instantly update Safety and Medical departments regarding employee's work status.
- » Identify root causes, corrective measures, and assign corrective actions.
- » Accurately track and manage all Industrial Hygiene samples and studies.
- » Accurately track and manage all ergonomic referrals, reviews, analyses, and corrections.

## Features

- » Automated OSHA decision tree logic and reporting.
- » Email notification for incidents and action plans.
- » Schedule, perform, and report the results of sampling data for a range of methods.
- » OSHA/RIDDOR and User-defined exposure limits.
- » Automatically calculate time-weighted averages, incorporating employee shift duration.
- » A laboratory interface to quickly and efficiently receive testing results.
